

# Evidence for the Spirit

**Why it matters:** Having an awareness of the evidence for an afterlife and a non-physical realm can profoundly impact your understanding of the meaning of life and death.

🔍 **Law of Entropy:** The Law of Entropy states that all physical things are moving from an orderly state to a state of disorder.<sup>1</sup> For example, if you start with a perfect intelligently ordered and stacked deck of playing cards, the more you randomly shuffle the cards the more they will be in a state of disorder. Similarly, the suns in the Universe randomly emit radioactive particles which collide with DNA, causing random disorders to increase in all biological life. Genetic degeneration “shows: a) the ubiquitous genetic degeneration of the somatic cells of all human beings; and b) the genetic germline degeneration of the whole human population. Likewise Genetic Entropy has reviewed research that shows rapid genetic degeneration in the H1N1 influenza virus. Genetic Entropy also documents ‘evolution in reverse’ in the famous LLEE bacterial experiment.”<sup>2, 3</sup> “A new paper (Lynch, 2016) written by a leading population geneticist, shows that human genetic degeneration is a very serious problem. He affirms that the human germline mutation rate is roughly 100 new mutations per person per generation, while the somatic mutation rate is roughly 3 new mutations per cell division. Lynch estimates human fitness is declining 1-5% per generation, and he adds; ‘most mutations have minor effects, very few have lethal consequences, and even fewer are beneficial.’”<sup>4</sup> From a persuaded reader, “Genetic Entropy is by far the most devastating critique of the modern neo-Darwinian Theory of Evolution. If mutations coupled with the reproductive filtering of natural selection cannot create nor maintain the integrity of the genome, what can stop it from degenerating?”<sup>5, 6</sup> An intelligent consciousness outside the physical universe could also exist outside the Law of Entropy, thus providing possible evidence that human consciousness could also exist after the death of the body.

🔍 **Hydrocephalus (Water Head):** Hydrocephalus is a condition that occurs when fluid builds up in the skull.<sup>7</sup> The name comes from *hydro*<sup>8</sup> meaning water and *cephalus*<sup>9</sup> meaning head. Interestingly, 50% of people born with an extreme form of this birth defect function with no lack in cognitive ability and “...have IQ’s of greater than 100...”, even though the void in their head “...fills 95% of their cranium...” as published in the journal *Science*.<sup>10</sup> One of the researchers involved, Professor John Lorber, a British neurologist, posed the question “How do we explain it?”<sup>11</sup> It has been said that the famous French philosopher, mathematician, and metaphysician, René Descartes (1596–1650) first hypothesized that the pineal gland in the brain was the seat of the soul, a unique meeting point between body and soul.<sup>12</sup> (Understand that although soul and spirit are often used interchangeably, they are not expressly the same thing. Specifically, the soul could be more accurately defined as the electrical or etheric part of the body, while the spirit is a non-physical distinct aspect separate from the body existing as thought.)<sup>13</sup> A hypothesis to explain how 95% of the brain can be missing and a person still function normally is that the brain is more of an encoder, decoder, and antenna which exchanges information to and from the soul/spirit. New research supports this hypothesis, which has shown that there are small calcite crystals as well as other crystalline structures in the pineal gland in which, “These crystals could be responsible for an electromechanical biological transduction mechanism in the pineal gland due to their structure and piezoelectric properties... The calcite microcrystals would have piezoelectric properties with excitability in the frequency range of mobile communications.”<sup>14</sup>

🔍 **Irreducible Complexity of Biological Molecular Machines (ICBMM):** Irreducible complex biological molecular machines, like the Flagellum, are made of many parts which only work if all parts are in the correct place, are the correct shape, and made of the correct material.<sup>15</sup> An example of a large irreducibly complex device is that of a mousetrap. If you remove one part from a traditional mousetrap, it no longer functions.<sup>16</sup> The accumulation of these irreducible complex biological molecular machines in action can be observed in the process of metamorphosis of a caterpillar into a chrysalis, liquifying itself into goo, and then transforming into a butterfly.<sup>17, 18</sup> The theory of evolution does not work<sup>19</sup> when studying this process which emphasizes irreducible complex biology on a large scale, since you cannot have a partially-transformed caterpillar turn into a butterfly and have it survive.<sup>20</sup> Once something is biologically dead, there are no retries. Evidence suggests an outside intelligence made the ICBMM’s.

🔍 **Overdesign of the Human Body and Genetic Redundancy:** Natural selection and evolutionary theory do not explain why either of the following exists: Overdesign in additional human facial expressions unnecessary for survival<sup>21</sup> and unnecessary backup genetic redundancy.<sup>22</sup> Also, see “junk DNA”<sup>23, 24</sup> and the weight of souls.<sup>25</sup> Collectively, these point to consciousness existing outside the physical universe.

All credit, praise, honor, and glory belongs to our beloved God!

## Bibliography

Note: Whenever possible, the Wayback Machine (<https://web.archive.org>) was used to permanently archive and preserve the integrity of the web based reference, at the time it was used as a reference. Since the Wayback Machine appends the original website onto the end of the Wayback Machine link, you need to manually copy and paste the entire link into a web browser for the archive.org links to work correctly. Also, a large number of old and/or out of print books are available for free to download from the world's largest library and university repository at <http://www.archive.org>, and can also be located at <https://books.google.com>.
